

Endless belts for paper straw production

Reduce belt exchanges,
increase lifetime.
Be sustainable with Esband.

Exciting belts.

There are belts and there is Esband.

Discover the difference.

The basic drinking straw made of polyethylene or polypropylene has been banned on the market since 2021. The ecological alternative: aper straws.

Esband **tube winder belts** are perfectly suited for the production of the straws as they are manufactured from an endless base material and therefore have no junction and prove to be durable and reliable in every situation. Furthermore, our transparent material does **not cause any abrasion** on your final product. But this is not the only positive side effect – by **reducing the belt exchanges** and **increasing the lifetime** of the belts in comparison to other regular processing belts, our Esband tube winder belts will also make a positive contribution to the environmental balance.

Advantages

- Endless base material
- smooth running performance
- long service life
- Tear-resistant and longitudinal stability
- Constant high friction
- High abrasion resistance

Industries

Packaging
Hygiene
Food

Areas of application

Paper straws or any other kind of paper or cardboard straws, e.g.

- toilet paper rolls
- kitchen rolls
- rolls for industrial packaging
